Cloud Service	Unique Service	Explanation	Why it is Unique?
Amazon Web Service	AWS Snowmobile	A physical box you use to move huge amounts of data to AWS.	It helps to transfer the data faster than the internet, using real hardware.
	AWS Ground Station	It let you connect to satellites and download their data using AWS.	One of the few cloud services that handles satellite communication.
	AWS Outposts	A global racing league and 1/18th scale autonomous car driven by reinforcement learning.	Gamifies ML education with physical cars and a competitive league.
	Nitro System	Custom hardware/software that offloads virtualization functions to dedicated chips.	Separates hypervisor from the main board for superior security/speed.
	AWS Lambda	It runs your code automatically without servers whenever something happens.	It started the serverless revolution and integrates deeply with AWS.
Azure	OpenAI Service	Enterprise access to OpenAI's advanced models like GPT-4.	Exclusive native cloud access to GPT-4 models.
	Azure Sphere	IoT security solution combining a certified chip, OS, and cloud service.	Integrates hardware security chips with cloud protection.
	Azure Stack HCI	Allows organizations to run Azure-style virtual machines locally.	Brings Azure cloud experience into on-prem data centre.
	Azure Arc	Let's you manage servers and Kubernetes across on-prem, edge, and other clouds.	Provides single control over multi-cloud and hybrid environments.
	Azure Virtual Desktop	Cloud-hosted Windows desktops accessible from anywhere.	Only service supporting multi-session Windows 10/11.
Google Cloud	Big Query	A serverless data warehouse for analysing huge datasets quickly.	Super-fast and fully serverless for big data.
	Cloud Spanner	A globally distributed SQL database that keeps data accurate everywhere.	Unique blend of strong accuracy + global scaling.
	Cloud Bigtable	A NoSQL database built for extremely large workloads.	Used in Google Search and Maps; handles petabytes easily.
	Cloud TPU	Google-made chips designed for very fast AI model training.	Exclusive Google hardware optimized for AI workloads.
	Vertex AI	A platform to build and use AI/ML models easily.	Tightly integrated with Google's Gemini models and TPUs.
